

## **Erratum**

### **Two HIFs may be better than one**

Page 212 of this Preview contains a typographical error. In the first sentence of the third from final paragraph of the Preview, the value “50%” should have read “500%.” The corrected sentence follows here:

In this issue of *Cancer Cell*, Kondo et al. (2002) demonstrate that introduction of the HIF2 $\alpha$ P531A mutant into 786-0 cells wild-type for VHL accelerated tumor growth rate, and increased tumor net weight approximately 500%.

**Tiffany Seagroves and Randall S. Johnson**
